

CISD

CHANGE IN STATE OF DELIVERY

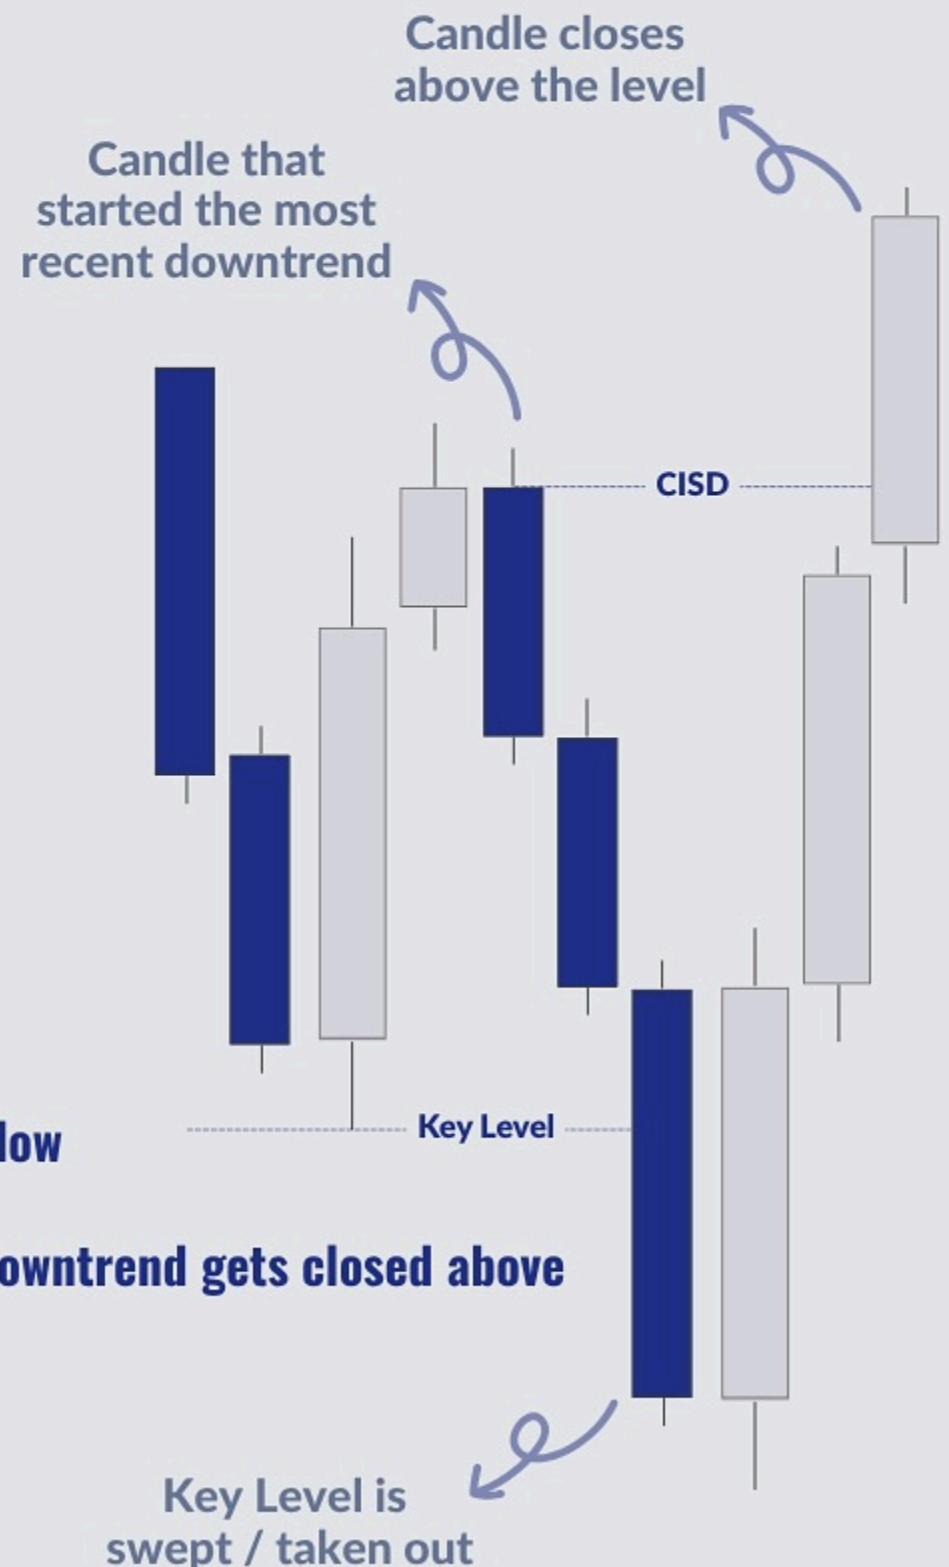

WHAT IS CISD ?

A **Change In State of Delivery (CISD)** occurs when there is a sudden momentum shift from bullish to bearish, or vice versa, signaling a potential market reversal

IDENTIFYING BULLISH CISD

A bullish **Change In State of Delivery (CISD)** signals a shift in market momentum from bearish to bullish

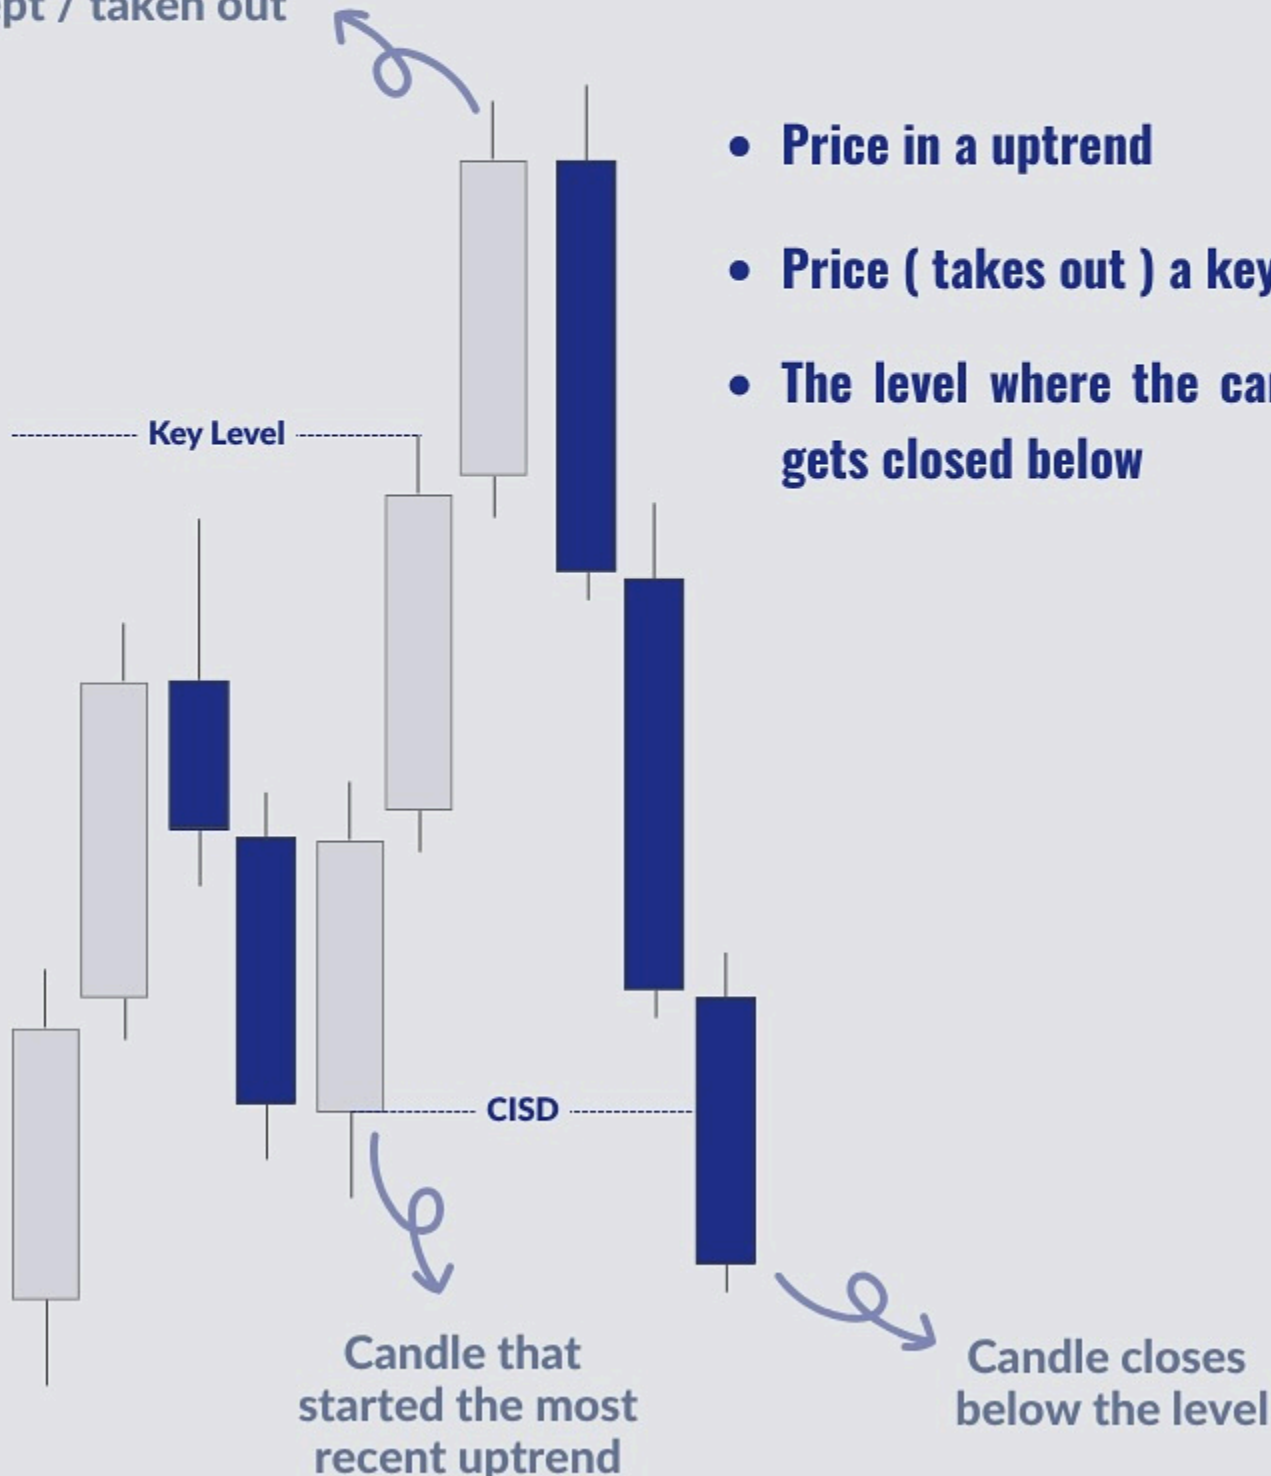

- Price in a downtrend
- Price (takes out) a key level such as a previous low
- The level where the candle that started the last downtrend gets closed above

IDENTIFYING BEARISH CISD

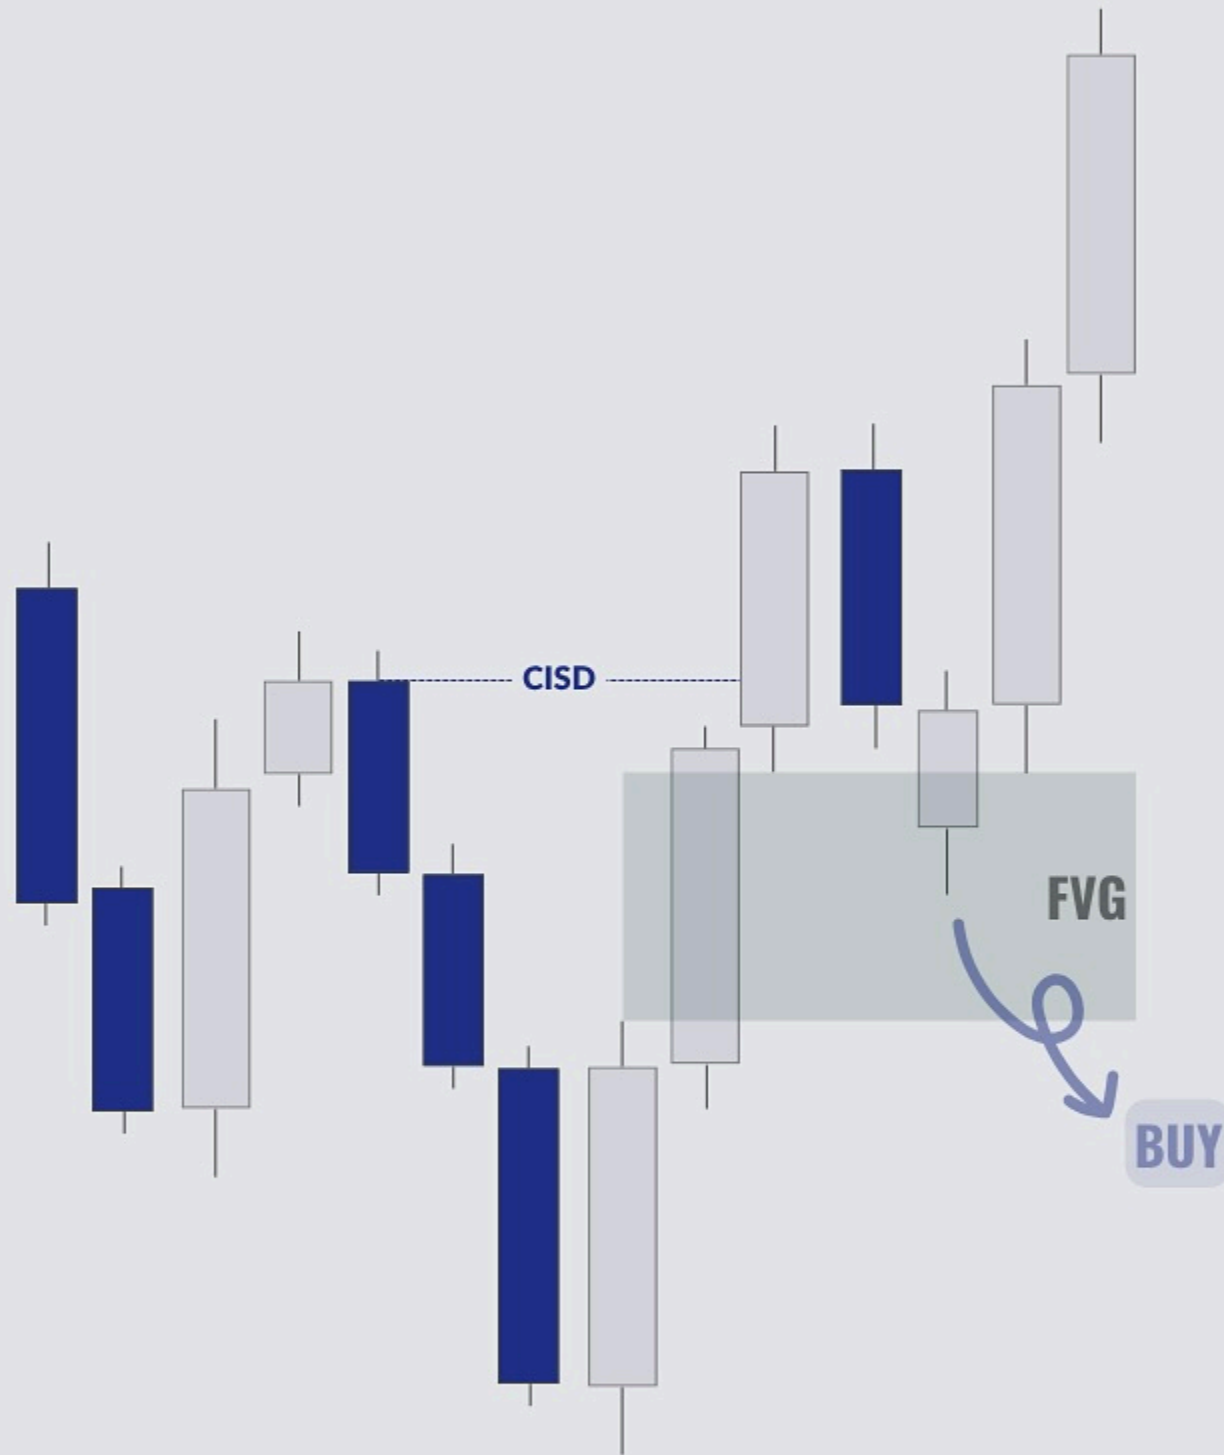

A bearish **Change In State of Delivery (CISD)** signals a shift in market momentum from bullish to bearish

Key Level is swept / taken out

- Price in a uptrend
- Price (takes out) a key level such as a previous high
- The level where the candle that started the last uptrend gets closed below

LONG TRADE EXAMPLE

CISD should be used as **a form of confluence**. In this example, it's a trigger to look for long trade opportunities, and once price retraces to the **bullish FVG**, a long entry is taken.

SHORT TRADE EXAMPLE

CISD should be used **as a form of confluence**. In this example, it's a trigger to look for short trade opportunities, and once price retraces to the **bearish FVG**, a short entry is taken.
