

ENGAGEMENT

THE ONES THAT KNOW

FOREWORD

Dear Knower,

Welcome to the Engagement PDF.

In this PDF I will share with you my most favorable entry patterns to engage within the MMXM frameworks. If you do not understand the MMXM frameworks yet, please refer to the educational content with regards to those before reading this PDF.

Within this PDF, the reader is expected to poses a certain knowledge foundation.

The schematics within this PDF, that represent the entry patterns, are created without any fuss. This way your focus is only on the shared entry pattern. In the real markets there will be way more candles between the price patterns than shared within this PDF.

I wish you a nice read and enjoy the schematics.

THE FRAMEWORK

First of all we need to look at the frameworks in which we look for the price patterns shared in this PDF to unfold. Just like with every other “Smart Money Concept”, one cannot go into the marketplace and look for the price pattern for the sake of the price pattern. What separates ‘us’ from retail minded traders is that we only look for price patterns once we have established a narrative and directional bias. The frameworks that we use to determine this are the Market Maker Models (MMXM’s).

FINAL REMINDER

Final reminder before we dive into the 'saucy' schematics.

If the framework of the current market is not obvious, one should NOT look for these price patterns.

STOP PLACEMENT

WHAT INVALIDATES OUR IDEA?

After the Smart Money Reversal has occurred within the pre-identified price level, we can look for the shared entry patterns to take place on the right side of the curve. Let us now study where one can put their stoploss based on these entry patterns within the overall framework.

STOP PLACEMENT

WHAT INVALIDATES OUR IDEA?

First, I want you to look at the following schematics. These schematics represents the MMXM's.

STOP PLACEMENT

WHAT INVALIDATES OUR IDEA?

Let us now add some 'lipstick' to the schematics.

ENGAGEMENT

The retracements on the right side of the curve reprice into imbalances. You can probably already guess where I am going with this if you understand the logic behind the 'MSS pattern'.

These swings that form after these retracements should not be violated if the right side of the curve is in fact going to play out within the MMXM framework. Therefore, the reasonable stop placement is the following:

By utilizing this stop placement, the theory behind MMXM's gets appreciated the most because the retracements create Balanced Price Ranges. The market should not return into or break these price ranges unless the idea is flawed.

ENGAGEMENT

Where the MSS pattern 'fails' is in the following environment:

when the high that formed after the retracement on the current timeframe is the low of a higher timeframe SIBI.

when the low that formed after the retracement on the current timeframe is the high of a higher timeframe BISI.

STOP PLACEMENT

THE ONES THAT KNOW

One must be patient with trailing their stop. One cannot trail their stop just because the market leaves the imbalance on which they entered. The schematics show you why.

Price is fractal.

So as a rule of thumb, the stoploss should be above or below the previous retracement high or low.

This high or low is often the swing which balanced a price range so therefore this swing should not be broken. This rule can only be applied when one also keeps the 'higher' timeframes in mind.

Therefore, one should always zoom out in timeframes whenever he is looking for what might invalidate his idea.

CONCLUSION

Thank you for reading this PDF all the way to the end.

Going forward I would advice you to pick a few patterns that are obvious to you and to start backtesting them. You should start training your eyes to seeing them. Eventually it will become like second nature to you and you will be bored when you see the price pattern unfold within the overall framework.

When you arrive at this stage, you really **Know**.

Good-luck.

Yours sincerely,

Zeussy
