

Breaker Block

Two of my favourite "ENTRY"
Pattern :)

Aggressive Entry

ASAP, price closes
its candles body
below
[Breaker Block]

Low Risk Entry

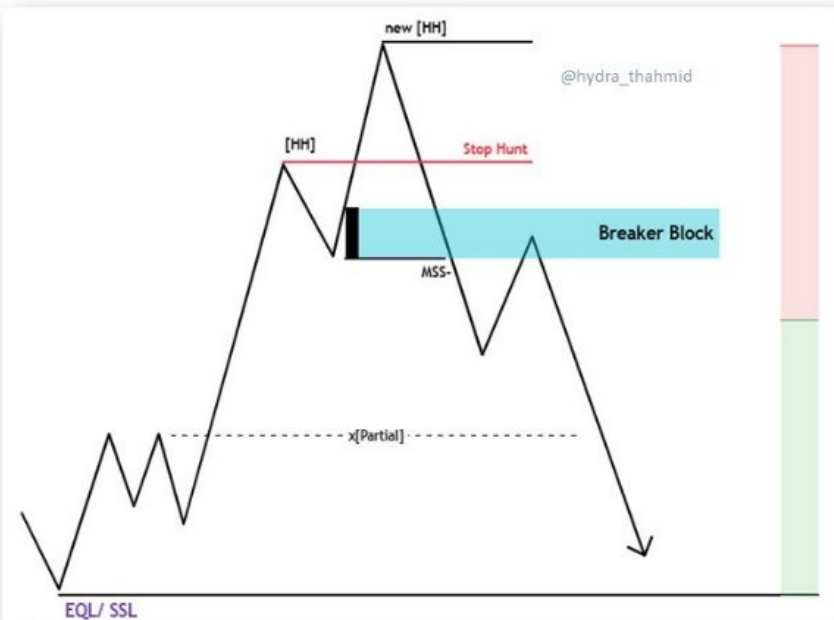

ASAP, Price closes
its 2nd Candles Body
Below the "Mid-
way" Level of
[Breaker Block]

@Hydra_thahmid

“Breaker Block” Entry [Template]

*The only model you'll ever need

ICT Core Content Notes #2

PM Trend- 1:00 to 4:00

@hydra_thahmid

Tips#1

1. A true day High or low will form [Between 3:00-4:00pm]
2. PM trend can be a continuation of AM trend or an intraday reversal into the close.
3. PM trend tend to be **faster** than AM.
4. Typically, the trend beings at-2:00 pm.
5. There's will be days when PM session will be very volatile

But generally, It will be **small expansion, consolidation.**

Tips#2 "SMT"

1. Compare Relative Equal Lows between Noon & 3:00 pm

***Usually, one indices will fail to make HH/LL.**

2. When BIAS is Bullish- Compare Lows.
3. When BIAS is Bearish- Compare Highs.

10k
SPECIAL

[M A C R O]

All "March" AM session [M A C R O] in a "#Thread" :)

New York Session [M A C R O]

AM

First M A C R O-
9:50-10:10 am est.

Second M A C R O-
10:50-11:10 am est.

Lunch

M A C R O-
11:50-12:10 am est.

PM

First M A C R O-
1:10-1:40 am est.

Second M A C R O-
3:15-3:45 am est.

My "Personal" NY Session
[M A C R O]
On US30

AM

First M A C R O-
8:20-8:30 am est. (NY Open Liquidity
Injection)

Second M A C R O-
9:20-9:30 am est. (Judas Swing)

PM

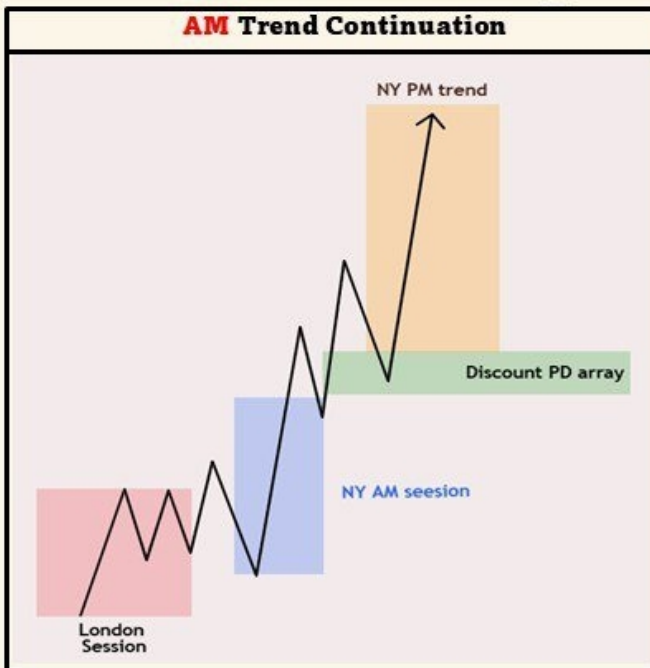

M A C R O-
2:50-3:10 am est.

@hydra_tahmid

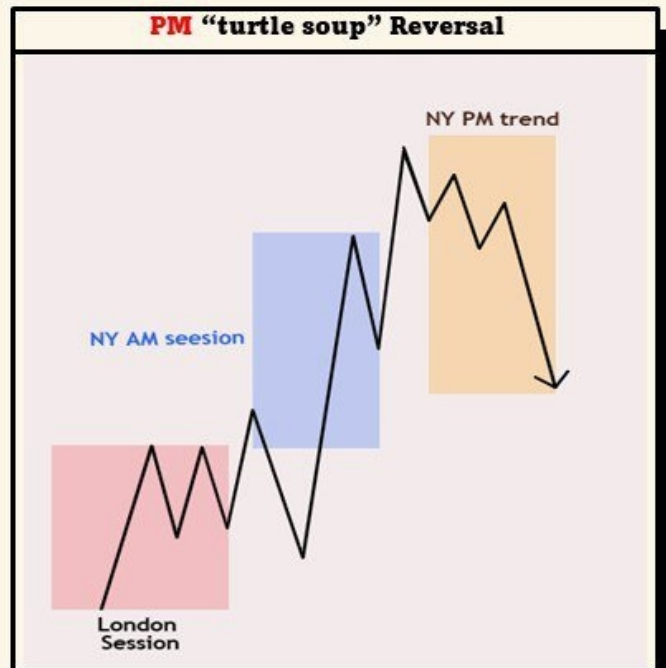

NY **PM** Session 2 common "Trend" [TEMPLATE]

@hydra-thahmid

AM Trend Continuation

PM "turtle soup" Reversal

How I choose which "FVG" to [Enter & Avoid]

High Probability

1. If price is not closing its candles "body" below the "mid-way" level of FVG then it's a strong sign that price wants to remain heavy towards "Buy Side Liquidity"
2. I will buy at 2nd & 3rd Candle :)

High Probability

1. If price is not closing its candles "body" below the "lower-quadrant" level of FVG then it's a strong sign that price wants to remain heavy towards "Buy Side Liquidity"
2. I will buy at 2nd & 3rd Candle :)

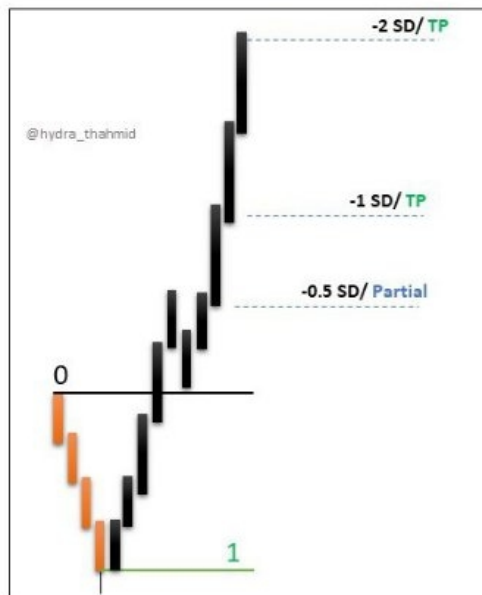

1. If price is closing its candles "body" below the "mid-way" of FVG

2. If price is closing its candles "body" below the "Lower Quadrant" of FVG

ICT "Standard Deviation Projection" [Template]

Last Swing that hit "FVG" is used
for SD projection

If I'm expecting **Bullish PA**, I measure the last
Swing that hit "FVG" from the 'low' to the 'high'
& it projects SD that is very useful to set
partial/TP :)

My FIB setting for "SD Projection" ↗

☒	0	☐	☒	-1.5	☐
☒	-0.5	☐	☒	0.5	☐
☒	1	☐	☒	-2	☐
☒	-1	☐	☒	-2.5	☐
☐	2.618	☐	☒	-3	☐
☐	4.236	☐	☐	-3.5	☐
☐	1.414	☐	☒	-4	☒

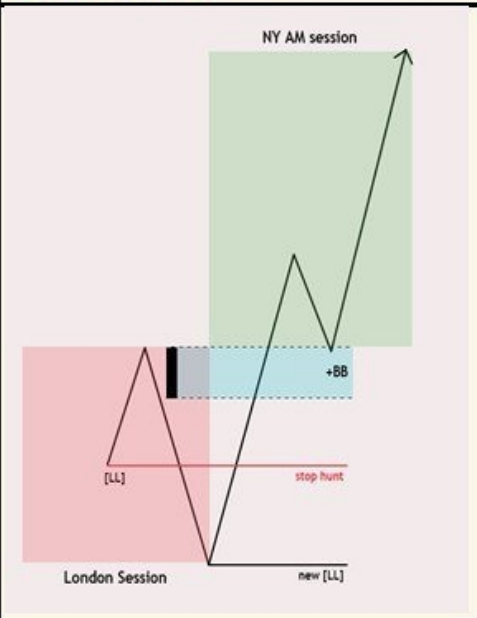

Tip's-

1. I don't hold more than "2 SD" as I'm a Scalper/ Short term trader
2. 65% of my TP got hit at "1 SD"

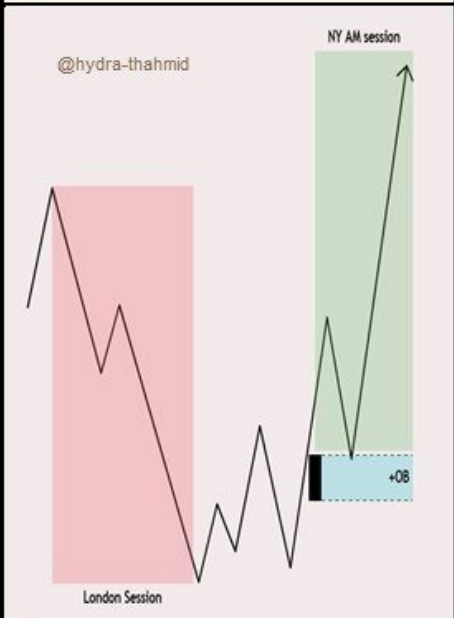

NY AM Session 3 common "Trend continuation" [TEMPLATE]

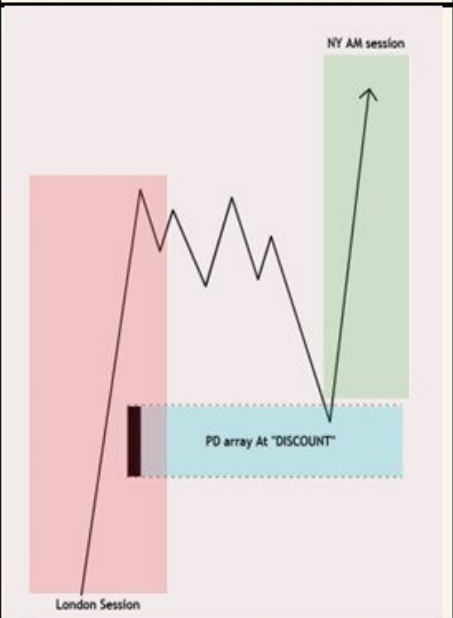

Breaker Block Trend Continuation

OB Block Trend Continuation

Trend Continuation From "discount"

ICT PD array [MATRIX]

FAQ- What is PD array ?

Premium PD array

- 1.Old high or Low
- 2.Rejection Block
- 3.Bearish OrderBlock
- 4.Fair value gap
- 5.Liquidity void
- 6.Bearish Breaker
- 7.Bearish Mitigation Block

Discount PD array

- 1.Bullish Mitigation Block
- 2.Bullish Breaker Block
- 3.Liquidity Void
- 4.Fair Value Gap
- 5.Bullish Order Block
- 6.Rejection Block
- 7.Old Low or High

[PREMIUM] PD array's

2. Bearish Rejection Block-is when a Price high is formed with Long wicks on the high(s) of the candlestick(s) and price reaches up above the body of the candle(s) to run Buy Side Liquidity out before Price Declines.

*Vice-versa for [DISCOUNT]

ICT Core Content Notes #1

AM Trend 9:30 to Noon

1. A true day High or low will form [Between 9:30-10:30]
2. It can be a continuation of overnight direction
3. It can end at 10:30-11:00am but it can continue up to noon or "NY Lunch hour"

Tips on "SMT" for Index

1. Compare EQL's formed at 5:00-9:30 am
2. When BIAS is Bullish- Compare lows [One index will fail to make a HH/LL]
3. When BIAS is Bearish- Compare Highs

*Look for SMT divergence to qualify the AM trend [few time per week]

When its not obvious-Don't force it :)

My Favourite “**MARKET MAKER BUY**” [Template] with “**BB**”

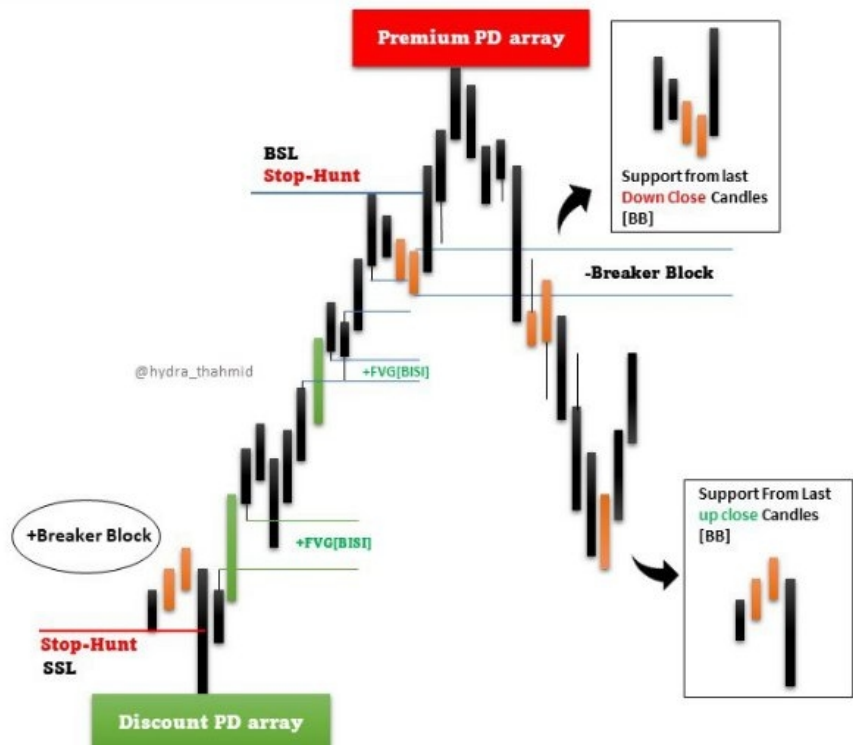

FAQ- What is PD array ?

Premium PD array

1. Old high or Low
2. Rejection Block
3. Bearish OrderBlock
4. Fair value gap
5. Liquidity void
6. Bearish Breaker
7. Bearish Mitigation Block

Discount PD array

1. Bullish Mitigation Block
2. Bullish Breaker Block
3. Liquidity Void
4. Fair Value Gap
5. Bullish Order Block
6. Rejection Block
7. Old Low or High

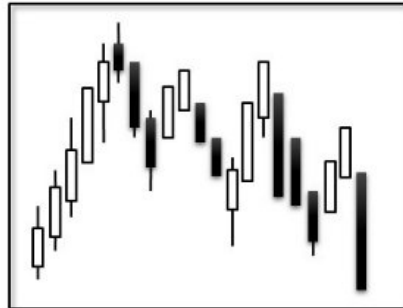

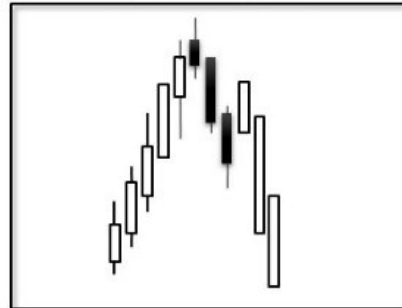

When to expect “**HIGH/LOW**” Probability Trading Session

- 1 When Dollar is consolidating
- 2 Before High Impact news
- 3 Bank holiday

High Resistance Liquidity Run
Low Probability Setup

Low Resistance Liquidity Run
High Probability Setup

**You're Gambling
in chop &
aimless Price
action. Stop it.**

@hydra_Thehmid

High Resistance Liquidity Run
Dollar Consolidating

High Resistance Liquidity Run
Forex Consolidating/Manipulating

High Resistance Liquidity Run
Indices Consolidating/Manipulating

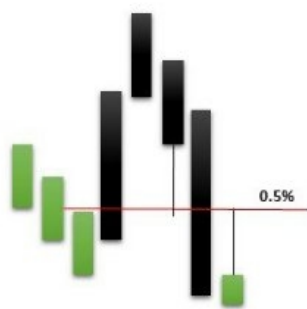

My all **"BREAKER BLOCK"** entry
[TEMPLATE]

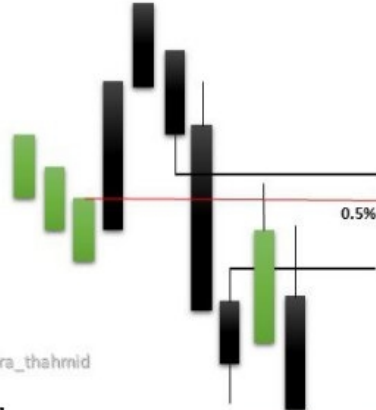

Aggressive Entry

1. ASAP, price closes its **candles body** below [Breaker Block]

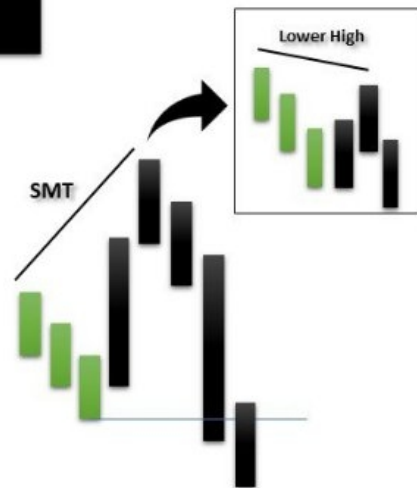

2. ASAP, Price closes its 2nd Candles Body Below the **"Mid-way"** Level of [Breaker Block]

@Hydra_thahmid

UniCorn

3. ASAP, Price retraced back & hit **"FVG"** inside [Breaker Block]

High Probability

4. ASAP, Price generates **"SMT Divergence"** & closes a candle **body** Below the [Breaker Block]

ICT Twitter [SPACE] NOTE's

How to know market is going
to [REVERSE]

****IF you see 3 Opposing
PD array's are getting
failed**

-For example- In a "Bearish" scenario-

@hydra_thahmid

*vice-versa for support.

01

Order Block
"Mean-Threshold"
Breaks!

02

Price Trading Above
a Short term
High.

03

Price Goes through
a "FVG" in Premium

**Kill it;
Abort it**

ICT Twitter [SPACE] Notes-

Power Of "Unfilled NWOG"
& when to expect it to get filled :)

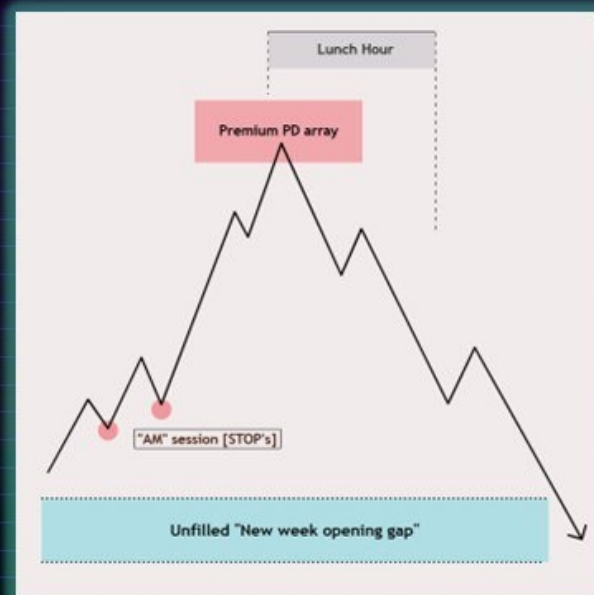

Tip 1

*** If we have a "New Week Opening Range Gap" & price is close to it yet price didn't fill the gap in the "AM" session, we are going to expend until we get to a HTF PD array.

Once we hit that, typically in the lunch hour, we will have some measure of "retracement" to "AM" session Stops.

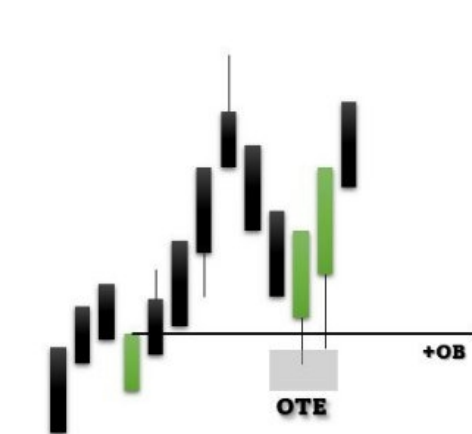

Now, price can dive more deep, if we have not filled in that "Opening Range Gap".

@hydra_thahmid

Bearish Example

3 of my Favourite **"OPTIMAL TRADE ENTRY"** (61.8) [TEMPLATE]

1.
When Price retraces
back to "Optimal Trade
Entry" & hits "Order
Block"

2.
When Price retraces
back to "Optimal Trade
Entry" & hits "FVG"

3.
When Price retraces
back to "Optimal Trade
Entry" & hits
"Breaker Block"

ICT Twitter "SPACE" notes

What factors to use to decide directional "BIAS"?

Market is reaching to Liquidity or reaching to inefficiency with the purpose in mind to re-price or re-balance that inefficiency-

That's what we use for directional "BIAS"

@hydra_thahmid

So there's three Factors to keep in mind-

But the "narrative" that's required that would deliver that up or down move,
Hinges on "TIME"

1.

We are repricing for "Liquidity"

2.

We are repricing for "inefficiency"

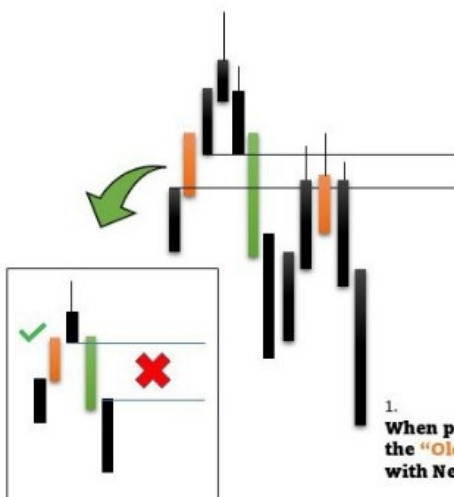

3.

& all of that is delivered on the basis of "TIME"

Three of my favourite "FVG" entry [TEMPLATE]

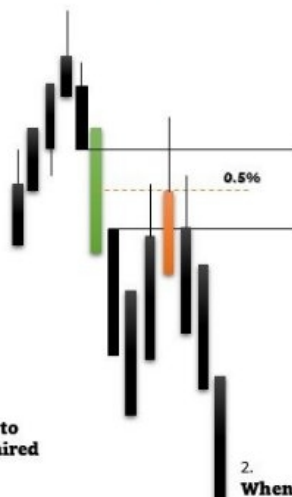

Inversion

1. When price Retraces back to the "Old unfilled FVG", paired with New "FVG".

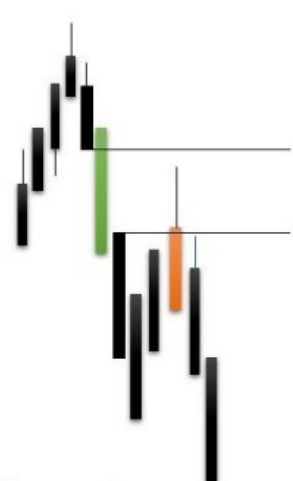

Inversion FVG gives Precision :)

Mid-Way Level

2. When Price don't close its candles body above the "Mid-Way" of FVG
✎ Sign that it want to remain "heavy" towards Sell Side.

IOFED

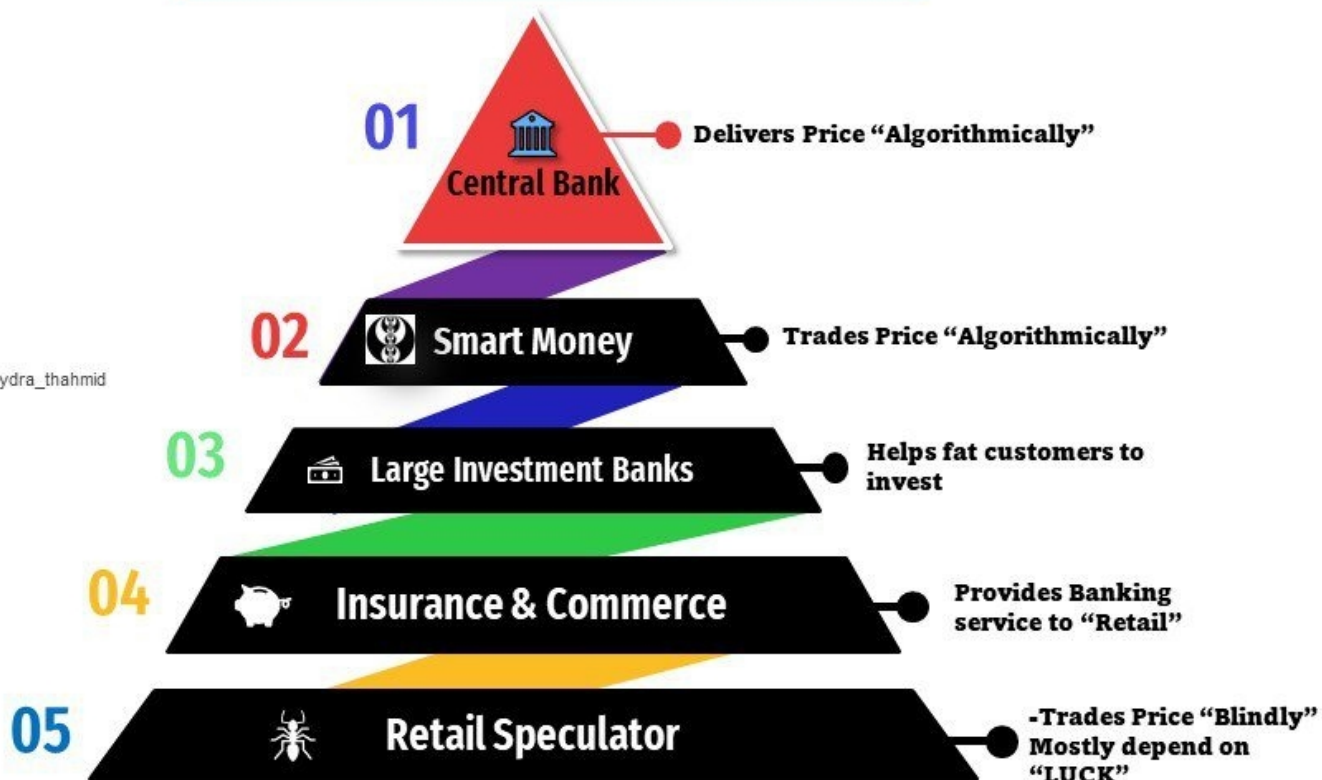

3. "Institutional Order Flow Entry Drill"

When Price just "Taps" into a FVG & leaves aggressively. Expect to see a strong run after IOFED :)

The Real Financial Food Chain

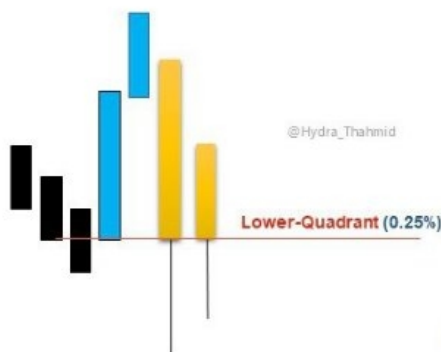

BREAKER BLOCK

When I Avoid-

1. When Price is not closing its candles body Below the "mid-way" level of [Breaker Block]

2. When Price is not closing its candles body Below the "mid-way" level & "Lower-Quadrant" of [Breaker Block]

3. [MANIPULATION]

When Price is closing its candles body below "BB" but retracing back from "A BULLISH PD ARRAY" quickly.

TIP-You should close trade once the 1st RED candle closes above "Mid-way" level :)

How to **"Know"** when market will **[MANIPULATE]**

For example- If you see indices/forex co-relative pairs going higher, but "DOLLAR" not going lower, rather **consolidating**, that means you have a condition in price action that will be very **"Manipulative"**.

Also, it indicates that price won't offer any **"High probability"** setup as price is now in a **"High resistance Liquidity"** run.

@hydra_thahmid

***Risk on-** Dollar Lower, Other pairs co-related with dollar UP [risk off]

***Risk off-** Dollar Higher, Other pairs co-related with dollar LOWER [risk on]

Dollar **"Consolidating"**

High resistance liquidity Run
[MANIPULATION] -Indices

High resistance liquidity Run
[MANIPULATION] -Forex
(EURUSD)
